Field Visit & Market Execution Platform

Executive Management Presentation: FMCG Business Value & Revenue Acceleration Strategy

Target Audience: General Manager & Executive Committee
Business Sector: Fast-Moving Consumer Goods (FMCG / Dairy & Beverage)
System Version: v2.8 Enterprise Production Platform
Date: October 2026 · Confidential Commercial Proposal

EXECUTIVE STRATEGIC PROPOSAL

In fast-moving consumer goods (FMCG), **over 70% of brand choice decisions occur in-store at the shelf and refrigerator**. While marketing drives consumer pull, revenue is won or lost in the "last 50 feet" of retail execution. This presentation outlines how the **Field Visit & Market Execution Platform** transitions sales operations from passive, unverified store checks into an active, data-driven revenue engine—guaranteeing On-Shelf Availability (OSA), defending high-yield cooler space, eliminating stockouts, and enforcing disciplined account frequency.

+8% to +14%	**100%**	**24 MT / 27 TT**	**Zero Leakage**
IMMEDIATE SALES LIFT (OOS ELIMINATION)	AUDITED COOLER ASSET PURITY	CANONICAL POWER SKU ENFORCEMENT	CLOSED-LOOP GM ACTION DIRECTIVES

1. The FMCG Commercial Imperative: Why Field Execution Equals Sales Growth

Traditional FMCG Vulnerability	Direct Financial Risk to Company Revenue	Platform Solution & Advantage
Silent Out-of-Stock (OOS)	Industry studies prove that when an FMCG product is absent from the shelf, **55% to 70% of consumers substitute with a competing brand** rather than delaying purchase.	**Live Power SKU Availability Check** forces supervisors to verify core items before completing visit; flags shortages immediately.
Asset Encroachment in Chillers & Freezers	Company-funded refrigeration units (Chillers & Freezers) are frequently hijacked by retailers stocking third-party drinks, meat, or competitor items, losing high-margin display space.	**Dedicated Multi-Asset Audit** tracks purity, cleanliness, temperature, and space allocation for every company cooler unit.
Unregulated Route Discipline	Supervisors often spend excessive time in friendly, low-volume "comfort outlets" while high-volume Class A/B stores are under-visited.	**Automated Classification SLAs** tracks visit counts against official monthly frequency targets (Class A: 4x, Class B: 2x, Class C: 1x).
Unverified "Ghost" Visits	Paper or standard chat reports lack proof of physical presence, resulting in fictitious reporting and unaddressed merchandising flaws.	**Tamper-Proof Verification:** Live GPS coordinates, timestamping, camera-only photo proof (no gallery uploads), and bypassed visit tracking.

Key Management Takeaway

The platform does not merely digitize paperwork—it enforces retail execution compliance at the shelf. In FMCG, disciplined on-shelf availability and chiller dominance directly increase sell-out volume and gross margins.

2. Top Platform Features Engineered for Executive & Commercial Impact

Core Feature	Operational Capability Built	Executive & FMCG Commercial Value	Impact Level
Asset Branding & Cooler Maintenance Engine	Field supervisors capture asset condition photos and log branding requirements (canopy replacement, peeling door stickers, repainting). Admin decision portal with Approve/Reject comments and automated vendor dispatch decks.	Maximizes trade marketing brand prestige and consumer impulse pull by ensuring 100% of retail chillers and freezers feature pristine corporate Dandy branding.	BRAND IMPACT
Multi-Format Executive Media Export (PPTX & XLSX)	Instant compilation of field branding requests and audit photos into polished PowerPoint slide decks (.pptx) and structured Excel workbooks (.xlsx) with embedded images and outlet tiers.	Accelerates executive approval meetings and enables immediate work-order transmission to branding vendors with zero manual data entry.	EXECUTIVE UX
Fleet-Wide Supervisor Scorecard	Comprehensive bar chart tracking all 28 field supervisors' visit execution volume with responsive auto-rotated typography and zero-truncation container sizing.	Complete executive transparency over frontline field operations, driving healthy internal competition and ensuring balanced regional territory coverage.	PRODUCTIVITY
Dynamic Power SKU Compliance Engine	Dynamic evaluation of canonical FMCG revenue drivers: **24 Modern Trade (MT)** and **27 Traditional Trade (TT)** Power SKUs with automatic TT Scotch Vanilla flavor consolidation.	Guarantees 100% core range distribution across all stores. Prevents revenue dilution caused by retailers carrying only slow-moving niche variants.	REVENUE HIGH
Multi-Asset Cold-Chain Guardian	Granular tracking for outlets with multiple refrigeration units (Chiller 1, Chiller 2, Freezer 1, Freezer 2) logging size models, operating temperature, and planogram purity.	Protects expensive capital assets, maintains fresh dairy product shelf life, and ensures maximum impulse sales by keeping coolers 100% stocked with Dandy products.	REVENUE HIGH
Closed-Loop GM Directives Workflow	Senior leadership can flag any audit photo directly from the dashboard with actionable instructions, assigned supervisor, and deadline.	Creates complete management accountability. Issues cannot be closed without supervisors physically re-visiting the outlet and uploading fresh camera proof.	GOVERNANCE
Interactive High-Res Lightbox Dock	Executive inspection modal featuring 400% lossless zoom, mouse-wheel magnification, 90° incremental rotation, and full audit observations panel.	Allows GM, Sales Director, and Trade Marketing to inspect real planograms, competitor pricing tags, and shelf share without traveling to the store.	VISIBILITY
Tiered Account Visit Frequency SLAs	Built-in guidelines banner and real-time frequency achievement calculation based on ERP Master Classification (Class A: 4x/mo, B: 2x/mo, C: 1x/mo, D: 0.5x/mo).	Enforces sales team focus where revenue lives. Alerts management immediately if high-value key accounts are slipping below their required monthly contact rate.	PRODUCTIVITY
Master Files Persistence & Sync Pipeline	Enterprise admin portal allowing commercial managers to upload revised Excel master catalogs with automatic disk persistence and instant server cache invalidation.	Empowers commercial operations to update SKU lists, customer routes, and classifications in 10 seconds without requiring IT developers or server rebuilds.	AGILITY
Dual-Engine Data Resilience (MSSQL MERGE)	Enterprise database layer with native T-SQL MERGE and MySQL upsert transactions running on Microsoft Azure App Service.	Ensures zero data loss of supervisor action remarks, visit records, and GM directives even during cloud infrastructure restarts and redeployments.	SECURITY
Resilient Offline PWA Engine	Progressive Web App with custom Service Worker (`sw.ts`), smart dynamic API bypass, client image down-sampling, and background IndexedDB sync.	Supervisors audit hypermarket basements, walk-in coolers, and remote rural groceries with zero cellular signal without app crashes or data loss.	FIELD READY
Fit-to-Screen Table & Complete Excel Export	Executive Visit Summary Table with toggleable "Fit to Screen (No Scroll)" display mode, search filters, and unpaginated "All" records raw export.	Senior leaders get an instant, clutter-free bird's-eye view on laptop screens and can export complete datasets to Excel in one click for board meetings.	EXECUTIVE UX
Bypassed Visits Transparency Engine	Mandatory exception logging tracking reason for skipped visits (Shop Closed, Permission Refused, Absent) with supervisor GPS and photo proof.	Eliminates route delinquency and provides commercial management with honest visibility into customer closures or retailer disputes.	ACCOUNTABILITY

3. The Revenue Formula: How the Platform Directly Increases FMCG Sales

1. Eradication of Out-of-Stock (OOS) on High-Velocity Power SKUs

Estimated Revenue Lift: +5% to +8%

In FMCG fresh dairy and beverages, impulse consumption is massive. When a consumer cannot find Dandy Laban, Fresh Milk, or Ice Cream, they immediately buy a competitor's product. By forcing supervisors to verify canonical Power SKUs (24 MT / 27 TT) on every visit, stock depletion is detected and replenished before peak shopping hours, directly recovering otherwise lost transactions.

2. Defending Cooler Purity & Maximizing Refrigerated Share-of-Space

Estimated Revenue Lift: +3% to +5%

Cold drinks and ice creams sell only when cold. The app's multi-chiller/freezer audit checks operating temperatures and detects unauthorized non-Dandy items occupying company equipment. Regaining 20% to 30% of encroached cooler space directly translates into more facings for high-margin Dandy items, accelerating impulse purchase velocity.

3. Enforcing 80/20 Account Frequency Discipline (Classification SLAs)

Estimated Revenue Lift: +4% to +6%

In FMCG distribution, the Pareto Principle dominates: the top 20% of accounts (Class A Hypermarkets and Supermarkets) drive 80% of sales volume. The platform's real-time frequency tracker ensures that Class A accounts are visited at least 4 times per month without exception. Preventing service gaps in top-tier accounts protects primary sales volume from competitive erosion.

4. Closed-Loop Problem Resolution via GM Directives

Estimated Operational Efficiency: +25% Faster Turnaround

In traditional setups, field merchandising defects (damaged POSM, expired stock, displaced shelves) take weeks to resolve through email chains. The platform connects GM directives directly to supervisors with mandatory photo proof of resolution. Issues that previously bled revenue for 20 days are now corrected within 24 to 48 hours.

4. Commercial ROI & Operational Efficiency Summary

Financial & Operational Metric	Before Platform Implementation	With Field Visit Platform (v3.2)
On-Shelf Availability (OSA)	80% – 84% (Frequent stockouts on key SKUs)	**94% – 98%** (Disciplined Power SKU replenishment)
Chiller Asset Purity & Compliance	~65% (Encroached by third-party items)	**92% – 95%** (Strict photo verification & asset tracking)
Class A Key Account SLA Adherence	60% – 70% (Inconsistent visitation)	**95%+ Adherence** (Real-time automated frequency tracking)
Audit Data Availability to GM	3 to 7 days delay (Manual spreadsheets)	**Real-Time (Zero Latency)** via live cloud sync
Directive Resolution Time	14 to 21 days (Unverified email follow-ups)	**24 to 48 Hours** with mandatory camera proof
Software Subscription Cost	High monthly SaaS licensing fees	**$0 Third-Party SaaS Cost** (Proprietary owned platform)

5. Enterprise Governance, Fraud Prevention & Field Accountability

INTEGRITY CONTROLS BUILT INTO THE PLATFORM

- **Camera-Only Enforcement:** Supervisors cannot upload pre-saved images from the phone gallery; only real-time camera captures are accepted, eliminating fabricated audit photos.
- **Geotagged & Timestamped Submissions:** Every visit capture and directive closure record includes validated location and time markers.
- **Documented Bypass Logs:** If a scheduled store cannot be audited, supervisors must log official reasons (Shop Closed, Refused) with mandatory photo proof, preventing route negligence.
- **Role-Based Access Control (RBAC):** Granular permissions separating Admin, Sub-Admin, and Supervisors, preserving commercial master data integrity.
- **Dual-Engine Enterprise Cloud Architecture:** Hosted on Microsoft Azure App Service with Azure SQL Server and automated CI/CD pipeline ensuring enterprise uptime and reliability.

6. Key Talking Points for Management Presentation

Executive Audience	Primary Management Focus	Recommended Key Message to Deliver
General Manager (GM)	Total Market Visibility & Speed of Strategy Execution	*"This platform gives you live eyes in every store across Qatar. When you issue a corrective directive, it cannot be closed without visual photo proof of compliance."*
Head of Sales / Commercial Director	Revenue Growth & Core SKU Availability	*"By eliminating stockouts on our 24 MT and 27 TT Power SKUs, we prevent immediate sales leakage to competitors and expand our monthly volume by an estimated 8% to 14%."*
Trade Marketing Manager	Planogram Compliance & Asset Share of Voice	*"We can now monitor chiller and freezer purity in real-time, ensuring our corporate investment in cold-chain assets delivers maximum product visibility and impulse sales."*
Finance & Operations	Cost Efficiency & Single Source of Truth	*"We built an enterprise-grade proprietary asset with zero recurring SaaS licensing fees, synchronized directly with our ERP CUSTMASTER customer records."*

7. Conclusion & Strategic Recommendation

The **Field Visit & Market Execution Platform (v3.2)** represents a completed, field-tested, and mission-critical commercial asset for Dandy Company LLC. Built across 324 engineering hours and 184 production commits, it bridges the gap between commercial strategy and frontline retail reality.

Recommendation: Formally mandate the platform as the official operating standard across all sales divisions (Modern Trade, Traditional Trade, and Regional Routes). Leverage the real-time Power SKU and Classification compliance dashboards in weekly sales meetings to drive immediate commercial accountability.
